Meet // Connect // Focus

---

The workplace has changed and continue to evolve. Offices and commercial spaces are taking fresh approach to the typical work environment. It is less about dividing space and more about open free flowing interiors that are playful and collaborative, with a focus on expressing a sense of character and individuality.

Pod evolution has come a long way. Originally introduced to enhance and support breakout space, pods have become rooms in their own right, creating an area where creativity and innovation takes place. Having long been used as a place to hold meetings that require a level

of privacy, pods are now being used in a very different way, helping us in the way we choose to work.

We are witnessing a new wave of modern pod that breaks away from the typical typology, helping promote a more collaborative and healthier work environment. Making happier employees with less time absent from work. With society moving away from the tradition of the personal desk, our pods provide a designated shelter for staff to physically and intentionally carry out a task that requires some 'focus' space. Improving an individual's concentration, safety and efficiency in their space.

# Scene

Designed by Boss

Scene has a loop structure with glass front and rear, to create unique spaces to meet, connect and focus. All with connectivity for the modern office. This unique freestanding system provides the perfect space for focus working and Video Conferencing. Scene affords the intimacy and privacy that is vital for today's workplace.

Scene responds to the current market need for enclosed yet collaborative spaces within today's workplace and educational environments. Its multifunctional properties provide an area for individual headspace, collaborative meetings and also supports more private interaction.

With these new workplace environments continually growing in popularity, we created a pod systems that offers an enhanced user experience. Our focus is to provide optimum space in terms of comfort while still retaining the flexibility that standard pods offer. With this in mind, we spent considerable time working on how this can be achieved. We have thought about lighting and air quality as well as sound and visual privacy. Creating a space that can be customized using textures, color and creative lighting to provide a work area that has personality and a sense of place.

### **Lighting**

Scene offers horizontal LED luminaire lighting as standard, creating a more even distribution of light. With four pre-set scenes - Calm Down, Energize, Concentrate and Stay Alert - you have the ability to set the scene. Warmer white light with slightly lower intensity helps users calm down when facing high stress. Cooler white light with higher intensity helps users become more energized. For example in the early morning when facing high stress, warmer white light may be used.

### **Connectivity**

AV allows technology to be easily integrated into the pod. Options include a bracket for mounting a media screen and AV sockets, each clearly labeled with their function. Standard configuration is 2 x power, and 2 x data sockets. Upgrade options can also be specified, to suit your needs.

### **Air Flow**

A ceiling-mounted ultra-quiet fan unit controls airflow from the surrounding environment is channeled into the pod through an inlet that maximizes air distribution.

# Human Centric Lighting

Simple, innovative lighting control.

With employee welfare fast becoming a greater focus within the workplace, surrounding attributes including lighting and temperature all contribute towards health and wellbeing. Lighting devoted to enhancing vision and comfort promotes an individual's happiness, mood and health.

Human Centric Lighting is the means by which the emotional wellbeing, comfort and productivity of individuals can be improved simply through the correct control of the lighting in place.

The main benefits are that it can improve concentration, safety and efficiency in workplaces or educational environments. Created by changing the colour and intensity of white light, the natural circadian rhythm of a person can be supported by using warmer (relaxing) light with lower intensity in the morning and evening, and cooler (energising) light during a typical working day.

Select the Weather (STW) lighting, which incorporates Human Centric Lighting, is the perfect accompaniment to the pod. Available within any of the pods ranges, STW is a simple yet innovative lighting solution using the latest LED control technologies and Human Centric Lighting.

With four pre-set scenes - Calm Down, Energise, Concentrate and Stay Alert - you have the ability to set the scene. Warmer white light with slightly lower intensity helps users calm down when facing high stress. Cooler white light with higher intensity helps users become more energised. For example in the early morning when facing high stress, warmer white light may be used.

157.5" x 217"

# Scene Pod Specification

## Features

- Seven Models Available
- Frame height 89.5"
- Power arch with CAT6 power & data panel (2 power & 2 data)
- LED luminaire lighting system.
- 1 x Active PIR motion/occupancy sensor
- Acoustic fully upholstered walls – Camira Lucia as standard.
- 8mm toughened frameless clear glass walls 10mm sliding door, featuring 2 levels of DDA compliant white line manifestations.
- 8mm pivot door
- Acoustic rating 37dB with acoustic Roof mat
- Acoustic ceiling panels upholstered in Camira Nexus Chalk.
- 1 1/3" Satin Silver Anodized Aluminum frame

## Optional Extras

- Select the Weather Lighting Control
- Neon Signage
- Writeable Glass Panels
- Magnetic Writeable Glass Panels
- Powder Coated Frame (Any RAL)
- Airflow Unit
- Additional Power and Data panel
- AV column with HDMI & VGA
- Door Lock
- Decorative End Panels
